

comnet

Secure by Design Solutions

Protect your network. Safeguard your operations.

In today's industrial environments, a single weak link can compromise your entire operation. At Comnet, we prioritize cybersecurity at every level—so you don't have to choose between connectivity and protection. We are a trusted part of your entire network's defense strategy. By ensuring our devices are fully secure, you know that Comnet will not be the weak point of your network.

Our products are secure by design and kept current with the latest standards to help prevent your communications infrastructure from becoming a target.

Built-In Protection That Goes Beyond the Basics

✓ Hardware-Level Security with PortGuardian

- Physically locks down a port if any change in state is experienced.
- Prevents unauthorized access at the switch level.

✓ Proactive Monitoring with our Network Management Software

- Get real-time alerts on IoT health, suspicious activity, and network integrity.
- Respond quickly to cybersecurity risks before they impact operations.

✓ Automated Device Defense with CameraDefense

- Instantly applies best-practice cybersecurity settings to IP cameras, IoT devices and Ethernet Switches.
- Reduces setup time while increasing protection.

✓ Secure Architecture with ApplianceDefense

- Secure software and system design for Windows based servers.
- Built-in safeguards for continuous uptime and protection against intrusion.

Part of a Complete Industrial Security Strategy

Comnet's cybersecurity features are part of a holistic approach to industrial communication—designed to keep your people, data, and systems safe in the most demanding environments.

Comnet makes cybersecurity simple, smart, and built-in.
